

## US Agency for International Development (USAID) Office of the Inspector General (OIG)

### Web Design & Development

- Web Security
- Section 508 Standards
- Database Architecture

### PROJECT OVERVIEW

The objective of the United States Agency for International Development, Office of the Inspector General (USAID/OIG) is to design corporate external and internal websites that are easy to use, have consistent presentation of content, and incorporate fast information retrieval mechanisms.

### PSI SERVICES & RESULTS

PSI is providing USAID with an accurate assessment of the current external and internal website designs. From this assessment, we will support the development of a plan of action to strategically design and implement recommendations for both the OIG Internet and Intranet sites. The website design must adhere to Section 508 Accessibility Standards and function within the constraints of USAID/OIG standard operating procedures for the Web.

PSI is also generating website designs and content specifications for both USAID/OIG's Internet/Intranet production and development servers based on Industry standards. Training and Q&A will be provided to the USAID/OIG staff on the technical specifications of the overall website design and content presentation.

PSI's designs have been noted for their originality, professionalism, and visual appeal. The look and feel offered by the design have been enthusiastically received for their ease of use and the intuitive nature of the user interface.

### TECHNICAL ENVIRONMENT

- HTML
- ColdFusion
- CSS
- Javascript
- MS SQL Server
- Microsoft IIS
- Adobe Photoshop
