

## Air Force Medical Service (AFMS)

### Telehealth and Enterprise Imaging Support Services

Telemental Health is the use of telecommunications technology to provide mental health services to AFMS beneficiaries in MTFs, Geographically Separated Units, and other remote sites as needed. This includes telephone consultation, remote consultation and referral via store-and-forward internet systems, video conferencing, secure messaging, virtual reality, and web-based interventions of various types.

- Develop a Center of Excellence for Air Force Medical Modeling and Simulation
- Creating a validated Distributed Human Patient Simulation network to train and sustain the medical skills required for readiness
- Program management, technical leadership, and business analysis
- Information Assurance

#### PROJECT OVERVIEW

Developing a joint FHCC between VA and DoD is a major initiative with high visibility for both Departments. The Government will realize overwhelming benefit in the simultaneous, non-duplicative provisioning of accessible, high quality health care for both the active duty and veteran beneficiary populations. Correctly done, this joint facility will provide a template by which future joint healthcare initiatives can be modeled, thus reducing the total cost of ownership as the VA and DoD move towards a realization of the Presidential and Congressional goals of complete interoperability between the two Departments.

#### PSI SERVICES

PSI's Telehealth Team currently provides direct professional services support to the Air Force Medical Services (AFMS) Office of the Surgeon General's Telehealth and Enterprise Imaging Chief and Deputy Chief. The objective of our support is to assist our customer in the identification, deployment, and sustainment of new and emerging technologies that will increase the operational efficiency, expand the footprint of the services provided, and enhance the level of mental health services we are able to provide our service members and their families. The PSI Telehealth Team is currently engaged in the following Telemental Health activities:

- Virtual Reality (VR) Deployment
- Video Teleconferencing (VTC) Deployment
- Web Based-Store & Forward Technology
- Defense Center of Excellence, Telehealth & Technology Meetings (DCoE T2)
