

Military Health System (MHS)

Executive Information and Decision Support (EIDS)

- Systems Analysis
- Systems Administration
- Programming
- Testing
- Implementation
- Documentation
- Security Maintenance
- Security Testing (DIACAP) Support
- Performance Monitoring for all EIDS hardware and operating system software

PROJECT OVERVIEW

The primary mission of the EIDS Program Office is to provide timely, accurate, and appropriate decision support information to those charged with the responsibility for managing the delivery of healthcare. EIDS makes multi-level healthcare management information available to users by receiving, validating, editing, processing, aggregating, and integrating all data as a result of healthcare encounters for the military active duty, retirees, and their dependents.

The focus of this project is to provide an infrastructure upon which the EIDS project controllers and contractors may build and sustain applications.

PSI SERVICES AND RESULTS

PSI provides day-to-day operations, support and maintenance of hardware and software infrastructure in support of applications that have been developed and are under development by other EIDS contractors.

The following software services are provided by PSI to the EIDS enterprise through various COTS applications:

- Application monitoring services
- Web server administration and associated services
- Integrated work flow management
- Capacity planning metrics collection and analysis

At the request of the Program Office, PSI provides estimation, impact analysis and procurement of system hardware, software, infrastructure, and applications in coordination with the EIDS hosting provider. PSI assists EIDS and other contractors in the task of network design as new applications are developed or as existing requirements change. PSI plans and schedules MHS system and component deployment assessments. In addition, PSI maintains and administers EIDS servers and systems in a manner consistent with industry best practices. Finally, PSI updates and maintains the Certification and Accreditation (C&A) documentation and provides security management, including supporting the development of policies and procedures.
